Two natural asphalts were examined: kir, a bituminous material containing over 8% ash, which is regarded as a product of weathering of oil, and Kair asphaltite containing only 0.4% ash and showing no signs of being subjected to extensive oxidation. The organic portion of the first contained 1.37% sulfur, that of the second, 6.88%. From the first, 6-7% acids on the organic matter were isolated and an analysis of these acids (Chemistry--Analytical, TT, v. 7, no. 11) (over)
